

ROSENVIEW[®] LX

User's Guide

ELECTRONIC
REVISION
CONTROLLED

The RosenView[®] LX is a moving map system that displays map views of the area passing beneath the aircraft. It allows you to see where you are in your journey – how far you have come and how far you have yet to go.

Using the RosenView LX with an Optional Remote Control

In flight, the RosenView LX automatically cycles between flight information data and aircraft location. Press the remote touchscreen \oplus to zoom down to street-level detail in the U.S. or western Europe, or press \ominus for higher-level maps. Press the \blacktriangle \blacktriangledown \blacktriangleleft \blacktriangleright keys to shift the viewing area of the map. These functions may also be available with externally wired cabin controllers.

Press **Mode** to open the Mode Menu and to select a specific map or data page for viewing. An externally wired Mode button may also perform this function.

Using the Mode Menu

1. Press the **Mode** button to open the Mode Menu, as shown above.
2. To select a different map display, press **Mode** again until the option you want to view is highlighted, and allow a few seconds for the menu to close and the RosenView LX to change the display.
3. The RosenView LX displays only the selected mode. The other views will not display until you press **Mode** and select another option or press **Auto** mode again.

Mode Menu Options

The RosenView LX moving map can be set to show one or all of these modes:

Map Low – Displays low-altitude map detail (street-level)

Map Medium – Displays low-altitude map detail

Map High – Displays high-altitude map detail (country)

Satellite Low – Low-altitude satellite imagery

Satellite Medium – Medium-altitude satellite imagery (country-region)

Satellite High – High-altitude satellite imagery (global)

Location Status – Current aircraft location only

Conditions Status – Current flight information only

Destination Status – Destination information only

Auto – Cycles automatically through all viewing options

Rosen's Universal Remote Control

The optional Universal Remote Control (P/N **0500-015**) comes pre programmed to operate all aspects of your RosenView LX, large-format displays, DVD players, and all RosenView passenger information systems.

For more information, refer to the *Universal Remote User's Guide* (P/N **101765**).

Optional Universal Remote Touchscreen

Remote Button	How it Works
Mode	Opens a menu of map viewing options and cycles through the Mode Menu options.
+	Zooms in on a map view. (Zoom times out after a pre-set time.)
-	Zooms out on a map view. (Zoom times out after a pre-set time.)
▲▼◀▶	Pans the map view north, south, west, or east.
OK	Centers the map view on the aircraft's location.
