

CABIN UPGRADES AND ENHANCEMENT OPTIONS

Modern aircraft are in service for decades. Technology and passenger expectations can change a lot over the course of 10, 20 or 30 years, which is why nearly all aircraft can benefit from some type of cabin upgrade or enhancement.

Seats and Upholstery

- Re-dye leather seats
- Reupholster existing cushions
- Completely replace seats

Cabinetry and Tables

Just like in a home, cabinetry or tables in an aircraft can be:

- Refurbished
- Replaced
- Refinished
- Have existing veneer or laminate surfaces replaced

Comfort Upgrades

- LED lighting to reduce jet lag
- Ergonomic furniture to make longer flights more pleasant
- Updates to lavatories to ensure comfort and cleanliness

Cabin Electronics

- Wi-Fi
- Bulkhead monitors and TVs
- Blu-ray players
- High-definition personal screens
- USB inputs and device charging
- Cabin information systems (moving maps)

Reasons to Upgrade a Cabin's Interior:

A clean, modern interior sends a clear message to passengers that the aircraft is well cared for and in good working order.

Business travelers or passengers who want to work on a flight will expect a certain degree of functionality and connectivity.

Regardless of where people are traveling or for what purposes there is a minimum expected for entertainment options, such as the ability to watch movies in high definition, play games or listen to music.
